

# Heart Stabilizer

## Beating Heart and Surgical Stabilization Product Catalog

Working on a better solution for off-pump  
coronary artery by pass (OPCAB)

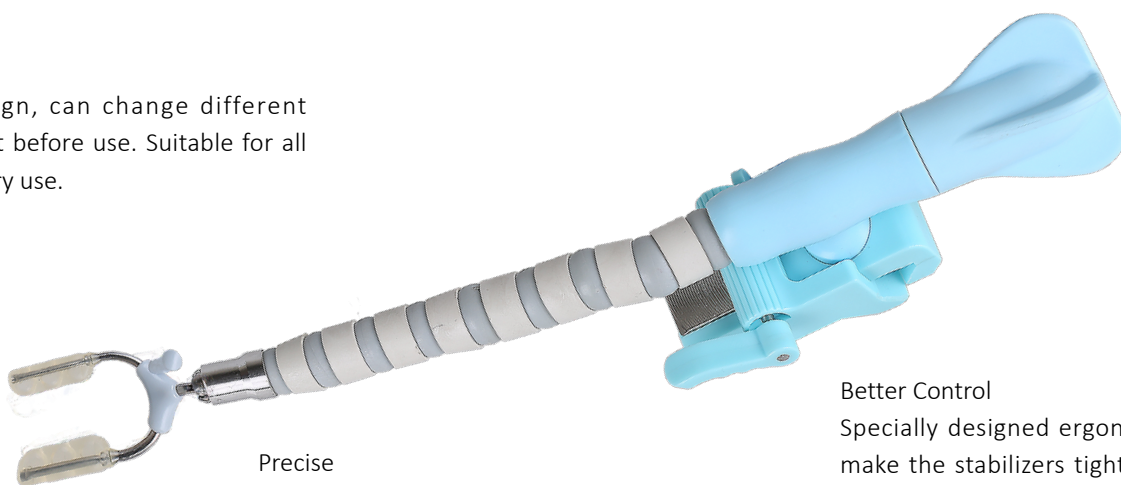

**HTKD MEDICAL**

# Product Introduction

The Heart Stabilizer designed and produced by HTKD Medical hold a higher standard for multifunctional performance during cardiac surgery.

## User Friendly

Special design, can change different stabilizer foot before use. Suitable for all OPCAB surgery use.

## Precise

Precise positioning, stabilization, and retractor for exceptional visualization in the surgical field.

## Better Control

Specially designed ergonomic handles make the stabilizers tightening control and stability.

A special designed Heart Stabilizer for minimally invasive cardiac surgery use. The HK-Yg or HK-XK can also be used with any surgical robot in the hospital or surgical center.

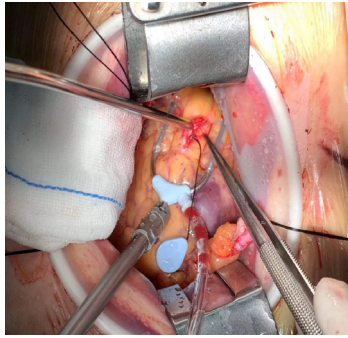

# Product Introduction

Used most often during on-pump Coronary Artery Bypass Grafting (CABG), the Heart Stabilizer and Stabilizer Foot from HTKD Medical allows the surgeon to position the heart optimally and securely.

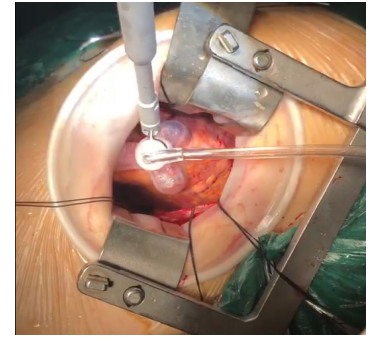

It features enhanced malleable zones at the base of the device that allow for more custom configurations and precise contouring. The textured, silicon-coated surface provides exceptional grip and stability.

These products are ideal for:

- On-pump CABG
- Lung transplant
- Aortic aneurysm
- Myomectomy
- Thoracoabdominal procedures
- Ablation
- Trans myocardial revascularization
- AVR/MVR

Exposure of the circumflex coronary artery and its obtuse marginal branches in preparation of an anastomosis. The heart is positioned to provide optimal exposure for a distal anastomosis of the left internal mammary artery to the left anterior descending coronary artery.

The Gecko™ (SF-VII) stabilizer foot is used to position the apex of the heart and ensure stabilization during beating heart surgery. Gecko™ stabilizer foot's advanced vacuum stabilization and dynamic tissue adherence combine to minimize tissue trauma.
